DETAILED ACTION

Allowable Subject Matter

1. Claims 4, 6, 12-14, 16, 17, 19 and 20 allowed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 21-30 rejected under 35 U.S.C. 103(a) as being unpatentable over Blonder (EP 0549890) in view of JP 11084116 further in view of Adachi et al. (6,469,75).

Regarding Claims 21-30, Blonder discloses an LCD display with microtextured back reflector and method for making same. The reflector a base plane and a pattern of microelements 11 and 12 as shown in Figures 1-3, 6 and 7 that have maximum lateral dimensions less than 125 micrometers and smooth continues mold-formed surfaces arising from the base plane. As Fig. 1 shows the spherical portions can be constructed in a way so that the vertexes of equilateral triangles intersect with each other. Figs 2, 3, 6 and 7, show that these projected and depressed portions are next to each other. Fig. 1 shows a six sided configuration.

Blonder fails to disclose the required number projected and recessed portion set of odd number greater or equal to three and the required reflective surface/plane. However, JP 11-84116 discloses a reflector for LCD that includes triangular ridges, i.e. recess/projected portions, perpendicular passing through vertex of which is inclined at predefined angle with the one passing sides of ridges where the required number of projected/depressed portions is disclosed.

Art Unit: 2826

Furthermore, Adachi et al. disclose an illuminating arrangement with reflector having inclined irregularities or corrugations where in Fig. 20, item 2302(a) is a reflecting plane/surface.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required number or projected portions and the required reflecting surface/plane in Blonder as taught by JP 11-84116 and Adachi et al., respectively, in order to have a liquid crystal display device with better performance.

Conclusion

2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
